SUBJECT: Allen Creek Drainage District  
Madison Street Stormwater BMPs  
SRF Project No. 5437-01

A portion of the Madison Street stormwater BMPs project qualifies as a Categorical Green project under the Green Project Reserve. The green project components include an underground stone infiltration trench, six leaching manholes and seven rain gardens. These green infiltration practices will facilitate the infiltration of stormwater.

The Allen Creek Drainage District is only financing the stormwater best management practices (BMP) portion of the Madison Street reconstruction project. The total as-bid amount of the stormwater practices is \$887,189. However, the total amount to be financed is 880,000. Of that amount, \$161,796 is for the installation of the green infrastructure practices. Therefore, the green infrastructure portion is 18.24 percent of the stormwater cost. The loan amount for the Madison stormwater BMPs project is \$1,155,000. The total green project amount is \$210,672.
